**John A. Warner, BSc, M.D., FRCS(C)**

Dr. John A. Warner is a University of British Columbia trained Urological Surgeon who completed a 3-year urologic oncology fellowship at Memorial Sloan-Kettering Cancer Center in New York City where he was involved in extensive research into the basic science of prostate cancer. His work is published in such prestigious journals as The New England Journal of Medicine, Cancer, and Prostate.

Dr. John Warner is a Urological Surgeon board certified by the American College of Surgeons and the Royal College of Physicians and Surgeons of Canada. He is currently a consultant Urologist to Fraser Health, one of British Columbia's health authorities, with an active clinical practice specializing in Urologic Oncology.

Dr. Warner's interest in HIFU therapy for the prostate began over 5 years ago when studying the initial writings on the impact of non-invasive, high intensity ultrasound waves on prostate tissue. Dr. Warner visited Regensburg, Germany, where he reviewed their results and was present during the treatment of several patients with prostate cancer. This convinced him of the importance and benefits of this technique and the need to offer Ablatherm® HIFU to North American patients.

Dr. John Warner continues to be involved in prostate cancer research on a clinical level. His more recent work can be found in the Journal of Urology.
